A water conserving toilet is a version of an old design but it is now newly designed to help save water and cut down on usage, according to consumer's reporting of on-line reviews. The goal of a water conserving toilet is to save the water needed to flush the toilet and replace it with water that is then saved for the garden. Water conserving toilets usually use less than one gallon of water to flush the toilet, replacing the water used to flush the toilet with water from a tank, recycling the water of the tank and saving it for the garden. The typical water conserving toilet replaces the water used to flush the toilet with an average of 1.5 gallons of water per flush. Contest time! Why not go hunting for some
